

AriAscend is a drone services company that provides mapping and plant health services to growers across the Willamette Valley. We have a unique, proprietary imaging system that lets you see the health of your entire plants, not just the tops. We can help you with

- Elevation and drainage issues
- Crop scouting
- Spotting weaknesses or potential disease outbreaks
- Spotting missing vines

AriAscend offers two packages:

- Our **Grower Mapping Package** is \$300 for farms up to 75 acres. You will receive a high-resolution map plus a digital elevation map so you can see the contours of your land. All the maps will be overlaid onto Google Maps so it's easy for you to navigate. If your farm is larger, e-mail or call us for a custom quote. We will also include a vanity shot of your farm at no charge.
- Our **Crop Health Package** is an NDVI (normalized difference vegetation index) package of 3 flights for \$750 for farms up to 75 acres. We have a proprietary imaging technique that allows you to look at the entire plant, not just the top of the plants. We include the digital high resolution and elevation maps and vanity shot noted above as part of this package. If your farm is larger, e-mail or call us for a custom quote.
- **Spring Special Discount:** purchase either package by June 30, 2017 and take 10% off of the package price (\$270 for the Grower Mapping Package and \$675 for the Crop Health Package).
- **Crop Health Package Extension:** depending upon your needs and goals, AriAscend can provide additional flights to our Crop Health Package. E-mail or call us for a custom quote.

Our professional pilots have FAA Remote Pilot licenses and are insured for \$2 million. We are experts in the field.
